Total Cost	\$27,440	Total Cost	\$2,809

Chem-Pruf Fiberglass Doors and Frames Will Not Rust - EVER!!

Just Try One!!!

Install a Chem-Pruf door in your worst possible application.

You will never buy another steel door again.
We Guarantee It!!!

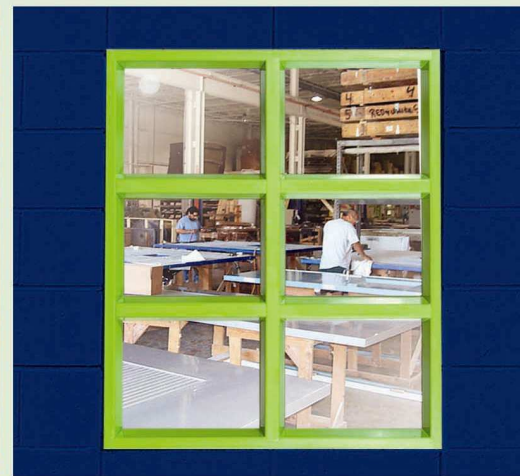

Why Fiberglass is Best

- Will **NEVER** rust. Completely sealed and impervious to the elements, it will maintain its integrity for the life of the product.
- Resin-Rich gel coat color is molded into door, frame and accessories. **NEVER** needs painting. Available in any color.
- Can be easily repaired in the field. Graffiti wipes right off.
- Naturally friendly to the environment. Longevity, cleanliness, strength and stability make it a sound choice for a "green tomorrow" and beyond.
- Perfect for new and existing construction. Every door is custom built to your exact dimensions without the custom charges.
- Guaranteed for 25 years to withstand any type of corrosive environment: saltwater, chemicals, detergents, chlorine, acids, humidity and more.

Why Steel Is NOT

- Rusts from the inside out. Once rust appears on the outside, the interior of the door has already been severely compromised, possibly causing health and security hazards.
- Requires continuous maintenance. Will need to be painted at least once during its service life.
- Ugly scratches and dents can never be removed
- Constant painting and replacement are detrimental to the environment. Over a 25 year period, as many as 10 doors could end up in a landfill.
- Most manufacturers only offer standard sizes. Custom openings mean custom prices.
- The standard warranty for a steel door is only 1 year against defects in workmanship and materials and will not cover failure due to hostile and corrosive environments.

Beautiful Gloss Finish

Easy To Repair, Easy To Maintain
Graffiti Wipes Clean!

Custom Designs And Sizes

Variety of Textures And Molds
Engineering Requests Welcome!

Fiberglass Window Frames

Many Different Styles
Any Size! Any Color!

THE COMPLETE PACKAGE

We Make It So Easy.

DOORS Each and every door is built according to your exact requirements. Just tell us what you need and we do the rest.

Chem-Pruf's face plates are unmatched in strength and durability. Laminated with multiple layers of fiberglass mat and woven roving, the plate by itself was tested in accordance with FBC Large Missile Impact. The missile could not penetrate the plate.

HARDWARE Chem-Pruf inventories an entire line of premium quality hardware. You are not limited though; we can provide any manufacturer and model specified.

Factory installed by certified, highly skilled craftsmen.

FRAMES Resin transfer molded solid fiberglass frames available in a variety of different styles and profiles.

Attaches easily to any type of wall condition and are not required on site during construction of the walls.

WINDOWS AND LOUVERS Resin transfer molded fiberglass window retainers in several styles match the color and finish of the door. Glass and glazing are included.

Solid fiberglass inverted "V" louvers provide consistent air flow while protecting your privacy and will never rust.

WALL WINDOW FRAMES & LOUVERS Complete your structure with fiberglass wall window frames and wall louvers – any size, any color – entirely corrosion resistant.

Fiberglass accessories are also available.

INDIVIDUAL CRATING SYSTEM - KEEPS EVERYTHING ORGANIZED

Each door is securely placed in its own individual crate. All crates are clearly marked with the specific opening information for quick identification. Anchors, loose hardware items and instructions are boxed inside the crate. The doors remain completely protected until time of installation.

UNITIZED DOOR SYSTEMS - NO ASSEMBLY REQUIRED

All single doors ship completely assembled in the frame with hardware installed ready to slip into your opening. It couldn't be easier.

(Double doors are prehung to ensure a proper fit and that hardware functions properly then disassembled for shipping purposes)

SIMPLE INSTALLATION PROCESS - SAVES YOU TIME, MONEY AND LABOR

Chem-Pruf's preassembled unitized door systems are quick and easy to install. Two installers can center the door unit into the wall and bond it in place in about one-third the normal installation time. All you need to do is:

1

Position the door into the opening. Shim if necessary.

2

Bond the frame in place and allow to cure.

3

Remove the straps and install anchors if desired.

Fire Rated Fiberglass Doors & Frames.

There's Absolutely No Comparison.

How Long Do You Have Before Your Fire Label Is Void?

With A Steel Door In A Corrosive Environment, There Is Simply No Guarantee. Don't Compromise Your Safety!!!
