Chem-Pruf P-Series

Care and Cleaning Recommendations

All Chem-Pruf P-Series door and frame products are made of fiberglass reinforced polyester components with a polyurethane topcoat finish. The finish is stain and abrasion resistant. However, the finish requires reasonable care. Wash periodically with warm water, use a soft cloth with a mild detergent approved for fiberglass or urethane finishes. Wax protectants can be used on the surfaces of Chem-Pruf P-Series products and oxidation removers can be used to remove slight surface oxidation.

Typically, products designed for the marine market are best suited for these cleaning and protectant purposes. Several excellent products are available from 3-M, and Meguiars, as well as other reputable manufactures.

Never use any abrasive scouring powders, cleaners, steel pads, or cleaners that contain sodium hydroxide or other chemicals known to harm fiberglass or polyurethane finishes.

For cleaner compatibility questions or concerns, consult the cleaner manufacturer or call the Chem-Pruf factory for assistance.
